

Open Fibre Networks

Welcome to your new home.
Let's talk about your broadband and TV.

Open Fibre Networks Limited (OFNL)

operates the fibre network at this location, enabling the delivery of gigabit fibre broadband, voice and TV services (selected locations only) to your new home.

OFNL operates an open access, 100% fibre-to-the-home network with a range of Internet Service Providers to meet all your needs.

You can choose from a range of services including;

- Endless entertainment with ultrafast broadband, and a competitive 18-month Sky Ultimate TV package
- Digital streaming services like Amazon Prime included in your subscription
- Ultrafast low latency services ideal for gaming
- A choice of Data only or Voice and Data bundled services
- Ultrafast speeds up to 900Mbps*

*900Mbps is currently being deployed to the sites on OFNL's network.

To find out what speeds you can get in your area, and for the latest information on the available Internet Service Providers, use our postcode checker at ofnl.co.uk or scan the QR code.

We aim to pre-install the fibre optic connection and Optical Network Termination (ONT) in your home before you move in.

Use the postcode checker on the OFNL website to find the available Internet Service Provider's in your area and the speeds you can get.

You can then contact the Internet Service Provider of your choice and sign-up to a suitable service. As part of the service they will send you a router.

Simply plug the router into the ONT for an instant broadband connection.

For further information on the OFNL network, and to discuss the benefits of fibre-to-the-home, please call us: **02921 678550** or visit: **ofnl.co.uk**.
